INTEGRITYGRC IMS

In the present time information security is exponentially gaining importance. Security has definitively crossed the frontiers of technological silos and is increasingly a subject found on management agendas, focusing on processes and people.

There is urgent need to support these practices by using effective tools that help organisations manage their Information security practices sustainably by effectively reducing the risk.

There is concern that if organisations are not armed with agile, versatile tools that optimise the management of information security, they will only work for compliance rather than security itself.

To answer this, and based on their extensive experience, INTEGRITY has developed two crucial tools for an effective Information security management.

Partner *Benefits*

Our partners specialise in offering Information security consulting and auditing services, and they value the differentiation, quality and effectiveness resulting from the services they provide their clients. The use of our embedded tools in their consulting and auditing services allows them to effectively differentiate themselves and deliver services in a more sustained and robust manner. This brings advantages to clients while ensuring a continued relationship in the post-project phase, resulting in continued revenue for organisations.

Partner Program Benefits

Our Products

The rapid paradigm shift in Information Security has forced organisations to adopt processes to safeguard their information security and risk management. Due to the short time available to implement these processes, many organisations have adopted rudimentary tools, not suitable for the purpose, and which do not effectively obtain appropriate results without considerable additional effort. Our exclusively developed security management support tools aim to respond to present challenges by providing an appropriate basis for the clear management of information security in organisations, rather than the inefficient use of rudimentary tools.
